📘 Summary Table — The Evolution of Management Thought

🧭 Introduction to Management

💡 1. What Would You Do? (Intro Story)

- Working in a restaurant (or any job) shows how much a **manager's skill** affects your experience.
- **Lisa**, a restaurant manager, represents **modern management** — adaptive, skilled, and people-focused.
- The **21st-century manager** faces constant change — globalization, tech shifts, new expectations.
- This unit explores:
  - Why managers are important
  - Who managers are and where they work
  - What managers do
  - How management is changing today

🎯 2. Why Are Managers Important?

> "A great boss can change your life." — Managers truly matter.

🔹 Three Key Reasons:

#	Reason	Explanation
1	**Managers handle uncertainty**	In complex, fast-changing environments, they make critical decisions and guide

#	Reason	Explanation
		organizations.
2	**Managers get things done**	They coordinate and create systems so employees can work efficiently.
3	**Managers influence people**	Studies (Gallup, Towers Watson) show employee productivity & loyalty depend on their relationship with managers.

🧩 Example:

- **John Zapp**, car dealership manager, survived tough markets by focusing on used car sales and motivating employees with small rewards.
- His success shows: **Managerial ability = Organizational survival**.

> 🗝️ Conclusion: Managers are essential because they stabilize, coordinate, and inspire.

🧑‍💼 3. Who Are Managers?

🌀 Then vs Now

Old View	Modern View
Managers “tell others what to do.”	Management is shared, collaborative, team-driven.
Clear hierarchy (boss vs employee).	Blurred lines — many employees now lead or manage tasks.

🧱 Definition:

> A manager is someone who coordinates and oversees others’ work to achieve organizational goals.

💬 Their focus: not personal tasks, but enabling others’ success.

🧩 4. Levels of Management

🏗️ Traditional Pyramid:

Level	Role	Example Titles
🥇 **Top Managers**	Set goals & strategies for the whole organization.	CEO, President, MD
🥈 **Middle Managers**	Translate top goals into actions; supervise first-line managers.	General Manager, Division Head
🥉 **First-Line Managers**	Direct daily activities of nonmanagerial staff.	Supervisor, Team Leader

> Lisa (restaurant manager) = Middle Manager.

⚙️ Nontraditional Structures:

- Some modern firms (e.g., project-based startups) don't have fixed hierarchies.
- Teams rotate leadership — but **someone still coordinates work** = management remains vital.

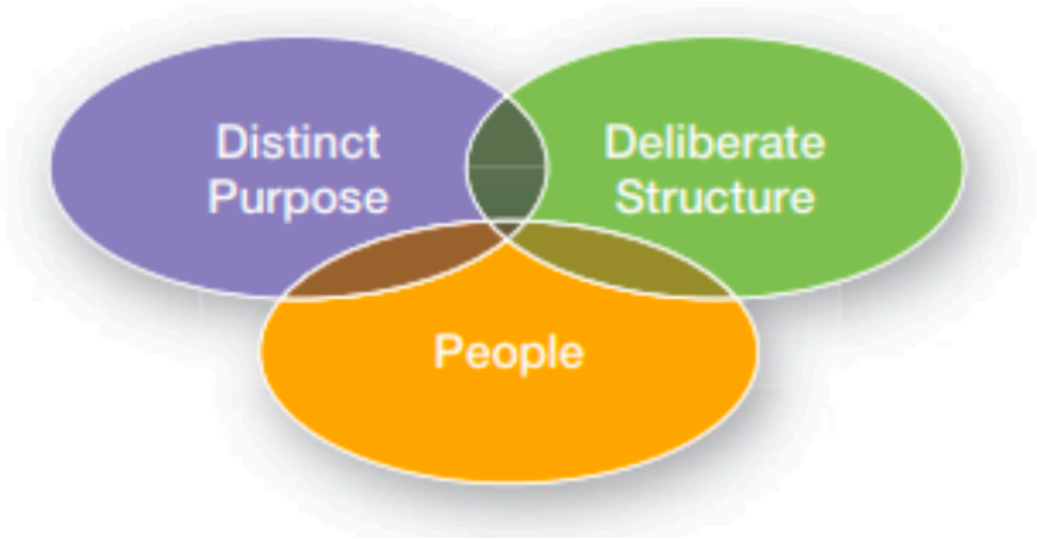

🏢 5. Where Do Managers Work?

🧭 Definition of an Organization:

> A deliberate arrangement of people working together to achieve a specific purpose.

🧱 Common Characteristics: (PSP)

Characteristic	Meaning
Purpose	Clear goals (e.g., profit, service, mission).
People	Work together to achieve those goals.
Structure	System to define roles, authority, and communication.

🏢 Examples:

- Colleges, NGOs, Hospitals, Startups, Sports Teams, Facebook, Churches.

🧮 Structure Types:

Type	Description	Example
Traditional	Fixed hierarchy, job roles, rules.	General Electric
Flexible / Modern	Dynamic teams, open communication, no time boundaries.	Google

> 🌐 Modern management adapts to remote work, fluid teams, and technology-driven change.

⚖️ 6. What Do Managers Do?

🧠 Definition of Management:

> Management involves **coordinating** and **overseeing** others' work so tasks are completed *efficiently* and *effectively*.

⚙️ Efficiency vs Effectiveness

Concept	Meaning	Focus	Example
⚡ **Efficiency**	Doing things **right**	Minimizing waste (**inputs**)	HON Company reduced manufacturing time & costs by $7M
🎯 **Effectiveness**	Doing the **right things**	Achieving goals (**outputs**)	Meeting customer demands, safety goals

> 🔁 Successful management = High Efficiency + High Effectiveness
>
> Poor management = Low in one or both.

🧩 7. How Do We Describe What Managers Do?

Management activities are viewed through **three classic approaches**:

Approach	Focus	Explains
Functions	Core duties (Planning, Organizing, Leading, Controlling)	What managers *should* do
Roles	Interpersonal, Informational, Decisional roles	How managers *actually behave*
Skills	Technical, Human, Conceptual skills	What managers *need* to succeed

(These are explored in later sections of the unit.)

🧭 POSDCORB — The Classic Management Framework

> **POSDCORB** = a timeless management formula developed by **Luther Gulick** and **Lyndall Urwick** (1937). ***(Go-lick Ur-Dick)***
>
> It captures the **7 core functions of management**, serving as a **checklist** for efficient administration.

🔤 Meaning of POSDCORB

Letter	Function	Description
P	**Planning**	Deciding *what*, *how*, *when*, and *who* — setting goals and blueprints for future action.
O	**Organizing**	Structuring people, tasks, and resources for goal achievement.
S	**Staffing**	Recruiting and developing the right people for the right jobs.
D	**Directing**	Guiding, motivating, and supervising employees to achieve goals.
CO	**Coordinating**	Harmonizing individual and departmental efforts for smooth functioning.

Letter	Function	Description
R	**Reporting**	Keeping stakeholders informed through data, performance, and analysis.
B	**Budgeting**	Planning, allocating, and controlling financial resources.

🧠 2. Detailed Breakdown of POSDCORB Functions

🗺️ 1. Planning

> "If you fail to plan, you plan to fail."

Essence:

Anticipating the future and deciding the best course of action.

Key Features:

- Setting **objectives & goals**
- Forecasting **future trends**
- Designing **strategies & policies**
- Formulating **action plans**

Example:

A marketing manager designs a campaign plan for launching a new product.

🏗️ 2. Organizing

> Creating the internal structure that brings plans to life.

Key Features:

- Defining **roles & responsibilities**
- **Grouping** similar activities into departments
- **Delegating authority** appropriately
- Establishing **communication and reporting lines**

Example:

Forming a project team — assigning leader, designer, developer, and tester.

👥 3. Staffing

> Ensuring the right people occupy the right positions.

Key Features:

- **Manpower planning** and **job analysis**
- Recruitment & selection
- **Training, development, and retention**
- **Performance evaluation** and motivation

Example:

Hiring and onboarding new sales executives for an expanding region.

🎯 4. Directing

> Leadership in motion — guiding and inspiring the workforce.

Key Features:

- Giving **clear instructions**
- **Motivating** employees (incentives, recognition)
- **Leadership and supervision**
- Handling **conflicts** and maintaining discipline

Example:

A manager motivates their team with recognition during meetings.

🔗 5. Coordinating

> The glue that binds all functions together.

Key Features:

- **Integrating** departmental activities
- Ensuring **smooth workflow** and communication
- Aligning **individual goals** with organizational objectives

Example:

Ensuring the production and logistics teams synchronize schedules for timely delivery.

🧾 6. Reporting

> Keeping everyone — from team to top management — informed and accountable.

Key Features:

- **Collecting and analyzing** performance data
- Preparing **periodic reports**
- Maintaining **transparency** and **accountability**

Example:

Submitting a quarterly report on sales and growth trends to the board.

💰 7. Budgeting

> Managing the lifeblood of the organization — money.

Key Features:

- Estimating **revenue and expenditure**
- **Allocating** financial resources across departments
- **Controlling** and monitoring expenses
- Revising budgets based on **performance and forecasts**

Example:

Preparing an annual budget for marketing campaigns (ads, events, digital promotions).

🧩 Mintzberg's Managerial Roles (FiLL-MoDS-NERD)

> Developed by ***Henry Mintzberg***, who observed real managers in action.
>
> He identified **10 managerial roles**, grouped into **3 categories**:
>
> **Interpersonal**, **Informational**, and **Decisional**.

👥 A. Interpersonal Roles (FiLL)

(Involving relationships and symbolic duties)

Role	Description	Example
Figurehead	Performs ceremonial & symbolic duties.	Attending official events or inaugurations.
Leader	Motivates, trains, and guides subordinates.	Encouraging team members, setting performance goals.
Liaison	Builds relationships outside the work unit.	Coordinating with clients or external partners.

🧾 B. Informational Roles (MoDS)

(Involving data collection and communication)

Role	Description	Example
Monitor	Seeks and gathers internal & external information.	Reading industry reports or tracking team progress.
Disseminator	Shares useful information with colleagues.	Sending updates to staff about policy changes.
Spokesperson	Represents the organization to outsiders.	Speaking at press conferences or public events.

💡 C. Decisional Roles (NERD)

(Involving making strategic choices)

Role	Description	Example
Entrepreneur	Initiates innovation and improvements.	Launching a new product or idea.
Disturbance Handler	Resolves conflicts and unexpected crises.	Handling employee disputes or technical breakdowns.
Resource Allocator	Decides how to distribute organizational resources.	Assigning budget or manpower to projects.
Negotiator	Represents the organization during negotiations.	Discussing contracts or partnership deals.

⚙️ Reflection + Action (Mintzberg's Observation)

- Managers constantly **switch between thinking and doing**.
- Example: Lisa (from the intro story) **reflects** when listening to employees' concerns and **acts** when resolving issues.
- Thus, management is **dynamic** — it blends planning, interaction, and rapid decision-making.

Management Skills & The Changing Managerial Landscape

💡 1. The Story of Dell Inc.

> "Leaders are not born; they are trained."

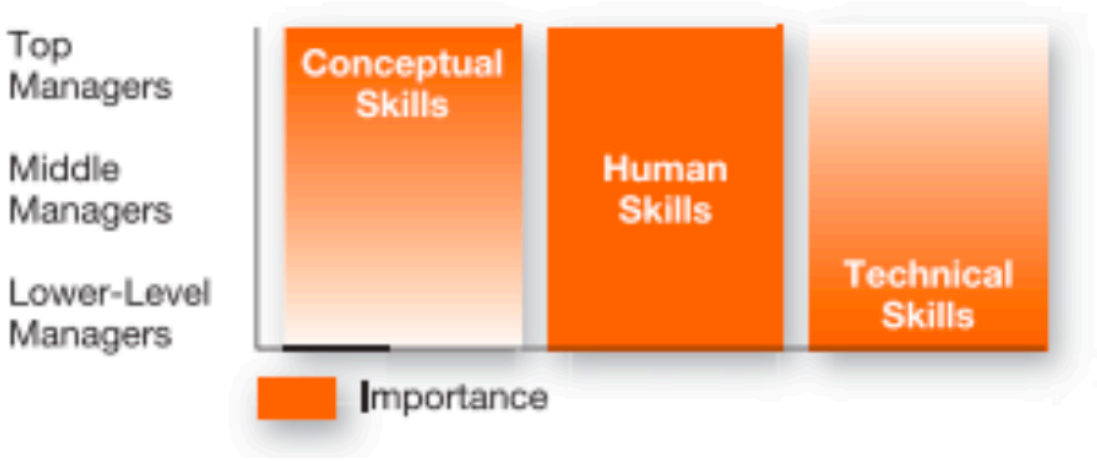

- **Dell Inc.** introduced a **five-day offsite management skills program** for first-line managers.
- Goal: develop *leaders who connect deeply* with front-line employees.
- Takeaways from the training:
  - Improved **communication**
  - Avoiding **snap judgments**
  - Strengthening **relationships** between managers and teams

⚙️ 2. Katz's Three Essential Management Skills

> Proposed by Robert L. Katz, these are the three pillars of managerial excellence.

Skill Type	Definition	Importance Level	Example
🧰 **Technical Skills**	Mastery of job-specific knowledge, tools & techniques.	**High** at **lower levels** (First-line managers).	A lineman promoted to manager uses technical know-how to guide technicians.
🤝 **Human Skills**	Ability to work effectively with people — individually & in teams.	**Crucial at all levels**.	Communicating clearly, motivating staff, resolving conflicts.
🧭 **Conceptual Skills**	Ability to visualize the organization as a whole and understand how parts interrelate.	**High** at **top levels**.	CEO predicting industry shifts and aligning divisions accordingly.

📊 Skill Emphasis by Management Level

> Technical skills dominate at the base; conceptual vision crowns the top.

💬 Real-World Example

Mark Ryan (Verizon Communications)

- Once a **telephone lineman**, now manages 100+ technicians.
- His success blends **technical expertise** with **human understanding** — recognizing and rewarding employees drives results.

🧩 3. Other Critical Modern Skills (CLAP-DA)

> Beyond Katz's trio, managers today need a toolbox of adaptive skills.

Skill	Meaning
Decision-Making	Judging alternatives and choosing optimal solutions.
Communication	Clear, persuasive information sharing.
Leadership	Inspiring and aligning people with vision.
Political Skill	Navigating influence, power, and organizational networks.
Analytical Skill	Interpreting data for better strategies.
Adaptability	Adjusting rapidly to change.

💬 *Dell's program aimed to develop these softer, situational competencies — the real differentiators of great managers.*

🌍 4. How the Manager's Job Is Changing

> "Welcome to the new world of managing — flexible, digital, and people-centric."

Modern managers face:

- 🌐 **Global economic & political uncertainty**
- ⚙️ **Technological disruption**
- 💼 **Ethical & security challenges**
- 👩‍💻 **Changing workplaces (remote, hybrid, dynamic teams)**

🏢 Case Study: Headwaters MB (Investment Bank, Denver)

- During recession, **CEO Dave Maney** restructured radically:
  - Laid off all but 7 key employees.

- Invited former staff to create **independent partner firms**.
- Headwaters redirected business to them, keeping a small commission.

- Result:
  - ✅ Reduced fixed costs
  - ✅ Increased flexibility
  - ✅ Refocused on marketing & growth

🧩 *Lesson: Modern management = Reinvention + Resilience.*

💫 5. The Modern Management Focus Areas

Key Shift	What It Means	Example
Customer-Centric Management	Every manager — not just marketing — must ensure customer satisfaction.	Cisco's CEO John Chambers personally listens to customer voicemails to sense emotion and feedback.
Innovation	Constantly improving products, processes, and models.	Headwaters' restructuring innovation.
Sustainability	Long-term thinking: balancing profit with people & planet.	Eco-efficient operations and ethical sourcing.

❤️ 6. The Power of Customers

> "No customers, no business."

- Managers must **understand and empathize** with customer experiences.
- **Employee behavior directly shapes customer satisfaction.**
  - Qantas Airways found most customer needs — baggage handling, crew courtesy, check-ins — depend on employee conduct.
- Hence: Managers must **build motivated teams → happy employees = happy customers**.

Why Study Management & Early Management Thought

💡 1. Why Study Management?

> "You may not be a manager yet — but you'll always be managed by one."

Studying management matters because **every career**, every organization, and even every daily frustration you face connects back to how well something is managed.

⚙️ Three Reasons to Study Management

Reason	Description	Why It Matters
🏛️ **Universality of Management**	Management principles apply to all organizations — business, government, hospitals, NGOs, schools.	Good management = growth & stability; poor management = chaos & inefficiency.
💼 **Reality of Work**	Every employee interacts with managers or performs managerial tasks (planning, coordinating, problem-solving).	Understanding management helps you **work better within systems** and **lead effectively** when needed.
🌟 **Rewards & Challenges**	Being a manager is demanding but fulfilling — influencing people, solving problems, driving results.	Offers **achievement, status, power, and creativity**, balanced by **stress and responsibility**.

🚦 Everyday Examples of Management in Action

- Spending **two hours at a government office**? ➜ Poor management.
- **Unhelpful sales staff**? ➜ Lack of direction and supervision.
- **Inconsistent customer service**? ➜ Weak coordination and communication.

💬 *Studying management lets you recognize — and fix — such flaws wherever you work.*

🧭 Benefits for Students of Any Field

If You Study...	Management Helps You...
Accounting	Plan audits, lead teams, manage deadlines.
Marketing	Organize campaigns, manage client relations.
Engineering	Coordinate projects, allocate resources efficiently.
Computer Science	Lead development teams, manage agile cycles.

> 🎓 No matter your major — management is the invisible skill behind your success.

🧩 2. Rewards and Challenges of Being a Manager

Rewards	Challenges
🏆 Recognition, respect, influence	⚡ Heavy responsibility, long hours
💬 Opportunity to lead and motivate	🔄 Need to balance competing demands
💡 Creativity and innovation	🧩 Managing uncertainty and change

> A good manager transforms obstacles into opportunities; a poor one multiplies both.

🏛️ 3. Early Management — The Origins of Organized Leadership

> "Before there were offices, there were pyramids."

Humanity has practiced management since the dawn of civilization — the *concept* existed long before the *theory*.

🏗️ Ancient Examples of Management

Era / Civilization	Example	What It Shows
Ancient Egypt (Pyramids)	100,000 workers coordinated over 20 years.	Massive planning, organizing, and control systems.

Era / Civilization	Example	What It Shows
China (Great Wall)	Continuous, large-scale construction projects.	Division of labor, logistics, and supervision.
Venice (1400s)	Shipyards used sequential work "stations."	Early **assembly-line** concept, HR systems, accounting, and inventory tracking.

> Even ancient managers used today's four functions: Plan, Organize, Lead, Control.

📘 4. Adam Smith & the Division of Labor (1776)

> "The Wealth of Nations" — where modern management found its first principle.

Concept:

👉 *Division of labor (job specialization)* increases efficiency and productivity.

Example:

- 10 specialized workers produced **48,000 pins/day**,
- while 1 worker alone made only **10 pins/day**.

Advantages:

- Improved **skill** and **dexterity**
- Saved **time**
- Enabled **mechanization and innovation**

Modern Parallels:

- Hospital surgery teams 🩺
- Restaurant kitchens 🍳
- Football teams 🏈

> ⚙️ Efficiency was born from specialization — management made it scalable.

🏭 5. The Industrial Revolution (Late 18th Century)

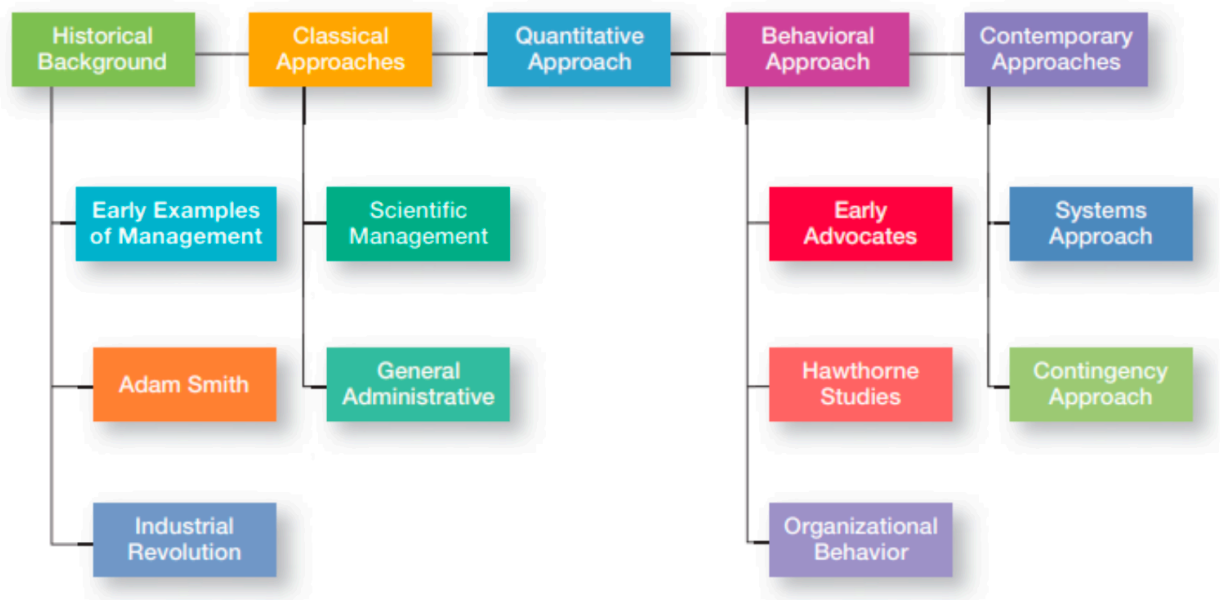

- Machine power replaced manual labor.
- Production moved from **homes → factories.**
- Managers became crucial for:
  - Forecasting demand
  - Allocating materials
  - Supervising large workforces
  - Standardizing tasks

💬 This era demanded **formal management theories**, leading to the birth of **modern management thought** in the **early 1900s.**

🧮 The Four Major Approaches to Management Theory

Approach	Time Period	Core Focus	Key Thinkers
Classical	Early 1900s	Structure, efficiency, and hierarchy	F.W. Taylor, Henri Fayol
Behavioral	1930s – 1950s	People, motivation, and leadership	Elton Mayo, Mary Parker Follett
Quantitative	1940s – 1960s	Decision-making, models, and data	Operations Research Analysts
Contemporary	1970s – Now	Systems, contingency, and modern trends	Peter Drucker, Mintzberg, Senge

> 🧭 Each era shaped management in its own image — mechanical, human, mathematical, and adaptive.

The Classical Approach to Management

> "The science of getting work done — the art of doing it well."

🧩 1. Essence of the Classical Approach

- **Period:** Early 1900s (the dawn of modern industrial management).
- **Goal:** Make organizations and workers as **efficient and rational** as possible.
- **Key Thinkers:**
  - **Frederick W. Taylor** → *Scientific Management*
  - **Frank & Lillian Gilbreth** → *Time and Motion Studies*
  - **Henri Fayol** → *General Administrative Theory*
  - **Max Weber** → *Bureaucratic Theory*

⚙️ 2. Scientific Management (F.W. Taylor)

> "Find the one best way to do a job — scientifically."

🔹 Background

- Frederick Winslow Taylor (1856–1915), known as the **Father of Scientific Management**.
- Published **"The Principles of Scientific Management" (1911)**.
- Worked at **Midvale and Bethlehem Steel**, where he observed inefficiencies and lack of standards.

⚙️ Taylor's Four Principles of Scientific Management (DeSCoD)

Principle	Description
1. Develop a science for each element of work.	Replace rule-of-thumb methods with precise study and analysis.
2. Scientifically select and train each worker.	Match workers' abilities with the right job.
3. Cooperate with workers.	Ensure work is done according to scientific principles.
4. Divide work and responsibility equally.	Managers plan, workers execute — both share accountability.

🧱 Example: *The Pig Iron Experiment*

Task	Result
Workers loading 92-pound iron pigs averaged 12.5 tons/day.	Taylor's method raised productivity to **47–48 tons/day**.
How?	By selecting the right worker, using scientific instructions, and motivating with incentives.

> ⚡ Outcome: Productivity ↑ 200%+, costs ↓, morale ↑ through fair incentives.

🧠 Modern Relevance

Taylor's legacy lives on in:

- Time-and-motion studies
- Work standardization

- Performance-based pay systems
- Job specialization

💬 *In short: Efficiency became measurable — and management became a science.*

🧩 3. Frank & Lillian Gilbreth – *The Motion Masters*

> "Every wasted motion is lost profit."

🔹 Contributions

- Pioneers of **motion study** and **work simplification**.
- Introduced **"therbligs"** *(gilberth spelled backwards)* (17 basic hand motions: search, grasp, hold, etc.).
- Designed **tools and workspace layouts** for efficiency.
- Invented the **microchronometer** to record and analyze movements precisely.
- Famous **bricklaying experiment:**
  - Reduced motions from 18 → 5 (exterior) and 18 → 2 (interior).
  - Result: Faster work, less fatigue.

> 🧮 Efficiency isn't about working harder — it's about working smarter.

🏠 Fun Fact

- The Gilbreths' life inspired the book ***Cheaper by the Dozen***, showing their home run like a lab of efficiency!

🏢 4. General Administrative Theory

> "What managers do, not just how workers work."

Two key figures reshaped this domain: **Henri Fayol** & **Max Weber**.

⚙️ Henri Fayol (1841–1925): The Architect of Management Functions

Five Functions of Management (predecessor to POSDCORB):

1. **Planning**
2. **Organizing**
3. **Commanding**
4. **Coordinating**
5. **Controlling**

🧭 Fayol's 14 Principles of Management (DEDICATORS - W - CIE)

No.	Principle	Essence
1	**Division of Work**	Specialization boosts efficiency.
2	**Authority**	Right to give orders = power + responsibility.
3	**Discipline**	Respect and adherence to rules are essential.
4	**Unity of Command**	One boss per employee — no confusion.
5	**Unity of Direction**	One plan, one goal for each group.
6	**Subordination of Individual Interest**	Organization > individual.
7	**Remuneration**	Fair pay motivates productivity.
8	**Centralization**	Balance between top authority and employee involvement.
9	**Scalar Chain**	Clear chain of command (top → bottom).
10	**Order**	Right person, right place, right time.
11	**Equity**	Kindness + justice = loyalty.
12	**Stability of Tenure**	Reduce turnover; keep experienced staff.
13	**Initiative**	Encourage employees to think and act.
14	**Esprit de Corps**	Promote teamwork and unity.

> 🌟 Fayol's legacy lives in every org chart, HR policy, and chain of command.

🧠 How Today's Managers Use Fayol's Ideas

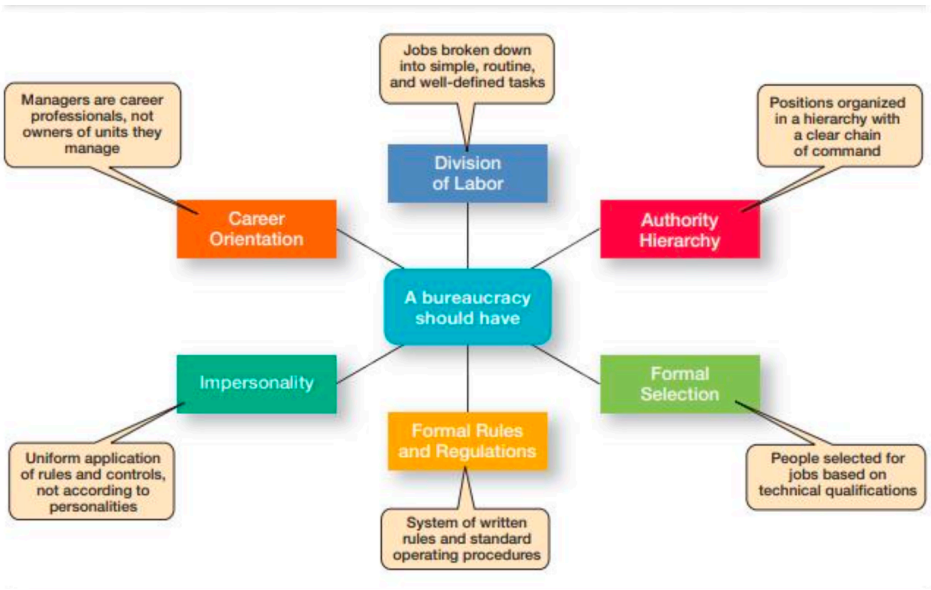

- **Functional management structure** (still standard today).
- **Unity of command** → Reduces role conflict.
- **Centralization balance** → Empowering employees while retaining control.
- **Managerial education** → His principles are now *textbook essentials* in MBA and BBA programs.

🏛️ 5. Max Weber (1864–1920): The Bureaucratic Ideal

> "Order, logic, and hierarchy — the anatomy of organizations."

⚙️ Core Features of Weber's Bureaucracy (TRIAL)

Feature	Explanation
1. Division of Labor	Tasks divided by specialization.
2. Hierarchy of Authority	Clear chain of command.
3. Formal Rules & Procedures	Consistent operations.
4. Impersonality	No favoritism — fairness through rules.
5. Technical Competence	Selection & promotion based on merit.

🧭 Purpose

Weber's **"ideal type"** of organization was a **model**, not a prescription — meant to show how large systems could run smoothly and predictably.

🧱 Modern View

While bureaucracy can cause *red tape* and *slow decisions*,

- It ensures **accountability**, **clarity**, and **fairness**.
- Even modern giants like **Microsoft, Samsung, and Cisco** retain bureaucratic elements for **structure and efficiency**.

> 🧩 The challenge today is to keep order — without killing creativity.

💡 6. Classical Approach — Summary Snapshot

Element	Key Contributor	Core Idea	Focus
Scientific Management	F.W. Taylor	"One best way" to do work	Efficiency at the task level
Motion Study	Frank & Lillian Gilbreth	Eliminate waste	Worker productivity

Element	Key Contributor	Core Idea	Focus
Administrative Theory	Henri Fayol	14 universal principles	Managerial structure
Bureaucratic Model	Max Weber	Ideal organization	Rational authority

🧭 7. Relevance Today

✅ **Taylor's principles** → performance metrics, SOPs, lean manufacturing

✅ **Gilbreths' motion studies** → ergonomics, industrial design

✅ **Fayol's 14 principles** → corporate structure, HR, leadership

✅ **Weber's bureaucracy** → governance, compliance, clarity

> 🪞 The Classical Approach gave management its skeleton — efficiency its soul.

The Behavioral Approach to Management

> "If the Classical Approach built the body of management,
>
> the Behavioral Approach gave it a beating heart." ❤️

🧭 1. Essence of the Behavioral Approach

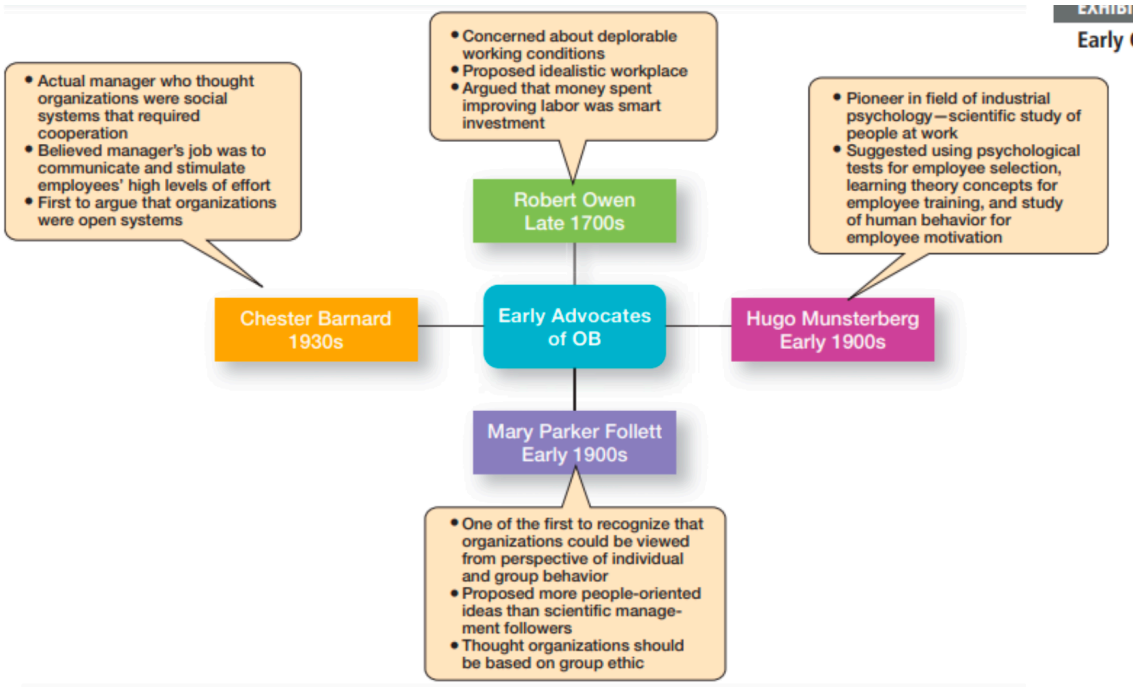

- **Focus:** People, motivation, emotions, relationships, and teamwork.
- **Core Idea:** Employees are **not machines** — their **feelings, attitudes, and group dynamics** matter.
- **Field:** This perspective evolved into what we now call **Organizational Behavior (OB)**.

> 🧠 Organizational Behavior (OB) = the study of how people act at work — individually and in groups.

👩‍🏫 2. Early Advocates of the Behavioral Approach

Four early thinkers championed the "human side" of management.

Thinker	Contribution	Key Idea
Robert Owen (1771–1858)	Early industrial reformer	Advocated for better working conditions, housing, and education for employees. Believed happy, healthy workers = higher productivity.
Hugo Munsterberg (1863–1916)	"Father of Industrial Psychology"	Applied psychology to management — focused on **employee selection**, **motivation**, and **training**.
Mary Parker Follett (1868–1933)	"Mother of Modern Management"	Believed in **coordination, empowerment, and participative decision-making**. Famous for saying, "The best leader gets things done through others."
Chester Barnard (1886–1961)	Wrote *The Functions of the Executive*	Viewed organizations as **cooperative systems**; stressed **communication** and **willingness to serve** as key to effectiveness.

> 🌼 These thinkers replaced command with cooperation, control with coordination, and authority with understanding.

💡 3. The Hawthorne Studies — Turning Point in Management

> "When you turn on the lights, people shine." 💡

📍 Background

- Conducted at **Western Electric's Hawthorne Works**, Cicero, Illinois (1924–1932).
- Initially a **Scientific Management** experiment on lighting and productivity.

🔬 Phase 1: The Lighting Experiment

Setup	Expected Outcome	Actual Outcome
Increased light for experimental group; constant light for control group	More light → higher productivity	Productivity increased in *both* groups!
Decreased light for experimental group	Less light → lower productivity	Productivity *still* increased (until light ≈ moonlight)!

🧩 **Conclusion:** Lighting wasn't the factor — **human attention** and **social context** were.

👨‍🏫 Phase 2: Elton Mayo & Harvard Team Join (1927–1932)

- Focus shifted from physical conditions to **social and psychological factors**.
- Studied:
  - Work design
  - Rest breaks
  - Group incentives
  - Peer influence

🧠 Key Findings

Discovery	Meaning
Group norms influence output.	Peer pressure shapes performance more than pay.
Social factors > Economic factors.	Belonging, recognition, and security drive motivation.
Worker attitudes affect behavior.	Positive relationships boost productivity.

Discovery	Meaning
Informal groups matter.	Team culture can make or break performance.

> 🌟 When people feel valued, they work harder — not because they have to, but because they want to.

🧩 4. Impact of the Hawthorne Studies

Then	Now
Workers seen as cogs in a machine.	Workers seen as humans with needs and ideas.
Focus on physical efficiency.	Focus on motivation, communication, and teamwork.
One-way authority.	Collaborative management and leadership.

> The Hawthorne effect = people improve performance when they know they're being observed.

🧠 5. The Rise of Organizational Behavior (OB)

From the seeds of the Behavioral Approach grew **OB**, which today includes:

- **Motivation Theories** → Maslow, Herzberg, McClelland
- **Leadership Styles** → Autocratic, Democratic, Laissez-faire
- **Team Dynamics** → Tuckman's model (Forming, Storming, Norming, Performing)
- **Conflict Management**, **Communication**, **Trust Building**

> OB = the modern manager's compass for understanding human nature at work.

🧰 6. How Today's Managers Use the Behavioral Approach

✅ Designing jobs that balance **efficiency + satisfaction**

✅ Encouraging **employee participation** and teamwork

✅ Building **positive work cultures**

✅ Using **motivation programs** (bonuses, recognition, career growth)

✅ Emphasizing **leadership, trust, and communication**

💬 *Every open office, brainstorming session, and feedback survey owes its roots to the Behavioral School.*

🧭 7. Summary Snapshot

Element	Core Idea	Key Contributor
Human Welfare	People are the organization's most valuable asset.	Robert Owen
Psychology in Work	Match people to jobs scientifically.	Hugo Munsterberg
Cooperative Management	Harmony and shared power.	Mary Parker Follett
Communication and Systems	Organizations as cooperative systems.	Chester Barnard
Social Factors in Work	Motivation through relationships and norms.	Elton Mayo & Hawthorne Team

---

Quantitative Approach to Management

> "If the Behavioral Approach taught managers to feel,
>
> the Quantitative Approach taught them to *think with precision*." 🧠

⚙️ 1. The Quantitative Approach (Management Science)

💡 Core Idea

> The Quantitative Approach uses *mathematical*, *statistical*, and *computational techniques* to improve managerial decision-making.

It is also known as **Management Science** — a **data-driven** way to make smarter, faster, and more logical management choices.

✈️ Real-Life Example: The Reverse Pyramid Boarding

- An airline used **space-time geometry** to create a *"reverse pyramid"* boarding system.
- Fill the back part of the plane, then the front part.
- Result: **Saved 2 minutes** per boarding cycle ⏱️ — proving that math can move mountains (or at least passengers).

🧬 Origins

- Born out of **World War II military operations** — strategizing troop movement, resource allocation, and logistics.
- After WWII, the same analytical techniques were adopted by business leaders.
- The **"Whiz Kids"** (ex-military officers) joined **Ford Motor Company**, applying math and statistics to business problems — creating the roots of **modern analytics**.

🔢 Tools and Techniques in Quantitative Management (not imp)

Technique	Purpose	Example Application
Linear Programming	Optimize resource allocation.	Decide the best combination of products to maximize profit.
Critical Path Analysis (PERT/CPM)	Schedule and control complex projects.	Construction timelines or software development cycles.
Economic Order Quantity (EOQ)	Determine optimal inventory levels.	Reducing stock costs for retail chains.
Simulation Models	Test decisions under virtual conditions.	Airline scheduling, factory layouts.
Queuing Theory	Manage waiting lines efficiently.	Supermarket checkouts, call centers.

🏆 Modern Example: Whole Foods Queue Management

- Introduced **serpentine single-line** checkout for Manhattan stores.
- Shorter waits despite longer lines.
- This system used **queuing theory** — predicting wait time mathematically and optimizing flow.
- Result: Happier customers, smoother operations, and higher sales.

📈 Quantitative Approach in Practice (POSDCORB)

Managerial Function	Quantitative Contribution
Planning	Forecasting, budgeting, resource allocation
Organizing	Workforce scheduling, layout optimization
Controlling	Quality control, performance measurement
Decision-Making	Predictive modeling, data analytics

> 🎯 The aim: turn complex problems into numbers — and numbers into decisions.

🧩 2. Total Quality Management (TQM)

> "Do it right the first time — and then keep improving it forever." ♻️

📘 Definition

TQM (Total Quality Management) = A **continuous improvement philosophy** focused on **customer satisfaction** and **process perfection**.

⚙️ Founders of the Quality Movement (De-mingos-Churan(Juran))

Thinker	Contribution
W. Edwards Deming	Pioneered statistical quality control; advocated for management responsibility in quality.
Joseph M. Juran	Developed the concept of the "Quality Trilogy" — planning, control, and improvement.

🔍 Key Principles of TQM (MICE)

Principle	Explanation
Customer Focus	"Customer" = anyone affected by the product/service (external or internal).
Continuous Improvement	Every process can be improved using measurement and feedback.
Employee Involvement	Empower teams to identify and solve quality problems.
Measurement & Standards	Use statistics to track performance and eliminate errors.

> 🌱 Quality isn't inspected in; it's built in.

🧠 Real-World Impact

- Japanese manufacturers (like **Toyota**) used Deming's ideas → **world-class quality revolution** 🌏
- Western companies later adopted these ideas in the **1980s–90s** to stay competitive.
- Led to global certifications like **ISO 9001** and **Six Sigma**.

🌐 Contemporary Approaches to Management

> "Beyond numbers — toward systems that breathe and adapt."

After the classical, behavioral, and quantitative eras, management evolved to see organizations as **living, interdependent systems** — not isolated machines.

⚙️ A. The Systems Approach

Definition:

A **system** is a set of **interrelated and interdependent parts** arranged to achieve a unified goal.

In management, this means understanding how all departments and activities affect one another.

🧩 Types of Systems

Type	Description
Closed System	Self-contained; no interaction with external environment (rare).
Open System	Constantly interacts with environment — inputs, processes, outputs, feedback (real-world organizations).

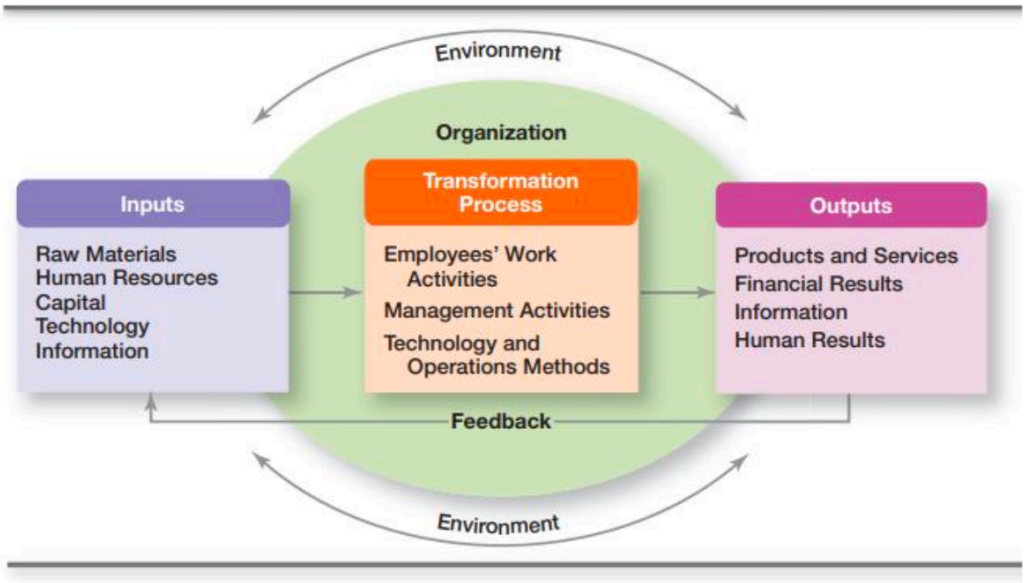

🏢 Open System Model

Component	Example
Inputs	People, capital, materials, information
Processes	Manufacturing, decision-making, service delivery
Outputs	Products, services, profits
Feedback	Customer satisfaction, performance data

☕ Example: Starbucks System

- The shift manager coordinates **ordering supplies**, **taking customer orders**, and **staff scheduling**.
- Each subsystem (supply, service, customer) affects the other.
- The manager's role: keep the entire system running harmoniously.

> 🧩 The Systems Approach = seeing the organization as an ecosystem, not a machine.

⚖️ B. The Contingency Approach

> "There is no one-size-fits-all management.
>
> The best approach *depends on the situation*."

💡 Core Principle:

> If–Then Logic
>
> If this is the situation, then this is the right way to manage.

🔍 Contingency Variables (DEST)

Variable	Description
Organization Size	Large firms need structure; small ones thrive on flexibility.
Task Technology	Automation or human labor? Strategy depends on task type.
Environmental Uncertainty	Dynamic industries (tech) require adaptive structures.

Variable	Description
Individual Differences	Leadership must match employee needs and skills.

> Managers must be situationally aware — what works in one context may fail in another.

🧭 Relevance

- Encourages flexibility, adaptability, and customized management strategies.
- Modern management styles (like Agile, Lean, or Design Thinking) are deeply **contingency-based**.

🧠 The Information Age & Its Impact

> "From assembly lines to data streams — management evolved again."

- Modern managers now lead **remote, digital, and global teams**.
- Technology = real-time data + decentralized communication.
- Decision-making powered by:
  - **AI tools**, **predictive analytics**, **ERP systems**
  - **Cloud computing** and **automation**

💬 *The new manager's toolkit isn't a clipboard — it's a dashboard.*

📘 Summary Table — The Evolution of Management Thought

Era	Focus	Key Thinkers	Core Theme
Classical (1900s)	Efficiency & structure	Taylor, Fayol, Weber	Science & control
Behavioral (1930s)	People & motivation	Mayo, Follett, Barnard	Human relations

Era	Focus	Key Thinkers	Core Theme
Quantitative (1940s–60s)	Math & models	Whiz Kids, Deming, Juran	Rational decision-making
Contemporary (1960s–Now)	Systems & adaptability	Barnard, Katz, Drucker	Integration & flexibility
